

04 • Capability Register

Every claim in this pack falls into one of three columns. The purpose of this document is that Dupoin can tell them apart without having to ask.

[LIVE] — running in production today at `app.marketmakersfx.net`, serving real members. Demonstrable on request, on a live account, at any time.

[BUILD] — designed and scoped, not yet built. Delivered in Phase 1 (see 06).

[SPEC] — specified on paper only. **No delivery date is offered and none should be assumed.**

| Live today

Platform

- Member application with email/Google authentication and verified signup
- Seven-day full-access trial with automatic expiry
- Access tiers and content gating
- Region-aware upgrade routing by jurisdiction
- Administration: member management, access grants, deposit verification
- Anti-abuse: signup fingerprinting, IP capture, trial-farm detection
- Growth analytics with a daily automated snapshot

Products

- Ten TradingView indicators and two strategies
- **Automated TradingView grant and revoke** — programmatic, self-healing, no manual sharing. This is the piece most competitors cannot replicate
- AI Trading Assistant — read-only MT4/MT5 connection, automatic trade import, behavioural leak analysis in dollars, discipline scoring, AI coaching
- Fundamental Desk research bot with PDF delivery
- Know Your Style profiling quiz
- Economic calendar
- Market news and sentiment across nineteen instruments
- Member dashboard

Marketing and funnel

- Landing page library, one page per product angle

- Creative-ID and campaign tagging convention
- Lifecycle email with automatic status-based segmentation
- Telegram channel automation with CTA rotation and engagement tracking
- Link tracking
- Compliance framework and creative rule set
- AI creative production line — brief to finished asset

Broker data

- Referred-account export parser with configurable column mapping
- Trading-account registry with balance matching
- Account-to-member matching and review flags

Build required

Delivered in Phase 1, before the pilot goes live.

Item	Note
Multi-tenancy	Tenant scoping across member data, with a full access-control pass. The largest single item
Branding layer	Per-tenant theme, logo, custom domain, email sender identity, document templating
Per-tenant funnel configuration	Broker routing, referral links, trial length, upgrade copy
Per-tenant feature toggles	Surfaces hide unless populated
Upload-and-publish studio	The IB's own content: video by link, documents and decks by upload, class schedule
Tenant-scoped administration and analytics	Each IB sees their own; MMFX retains a cross-tenant view
Content policy and takedown	Review queue and enforcement
The short foundation course	Produced neutral-branded and presenter-free
Neutral engine brand	For the TradingView suite (see 02 , white-label wall)

Deferred to Phase 3, after the pilot:

Item	Note
Sub-IB attribution and reporting	Blocked on Dupoin data — see 05 , condition 1
IB-facing portal	The IB's own leads, funnel, volume and payout view
Server-side conversion events	Improves ad optimisation; not required to launch
Short-form / TikTok pipeline	
Multi-tenant ad-account structure	Required before Tier 3 scales

Specified only

MT5 expert advisor — an autonomous gold strategy. Fully specified, not built. It is listed here for completeness because it will come up in conversation. **It is not part of this proposal and no timeline is attached to it.**

What this means for the pilot

The pilot does not depend on inventing anything. Every product a trader touches — the indicators, the AI assistant, the research bot, the quiz, the calendar, the news, the funnel — is live in production today and has been serving MMFX's own members.

Phase 1 is the work of making a working single-brand product serve multiple brands. That is a substantial engineering effort and it is honestly represented as such in 06 . But it is a different and much lower risk than building a product from a specification.
