What Market Makers FX is

MMFX trains and equips retail **gold (XAU/USD) and forex traders**. Members get a complete trading desk in one app: the daily market read, proprietary charting tools, a full course, live teaching, and — as of Aug 2026 — an AI assistant that analyses their actual trading account.

The founder and face of the brand is **Don**. All member-facing and ad copy refers to Don, never any other name.

- **Member app:** `app.marketmakersfx.net`
- **Marketing site:** `marketmakersfx.net`
- **Community:** Telegram

How the business makes money

There is no subscription. MMFX is an introducing broker (IB).

A member keeps full access by **funding a trading account (US\$500) with a partner broker** through MMFX. That money is **the member's own trading capital, in an account in their own name** — it is *not* a payment to MMFX. MMFX is paid rebates by the broker based on the member's trading volume.

This is the single most powerful thing in the offer, and it must be framed correctly:

✓ "The desk is free — you just need a funded account to trade with." ✗ "Pay \$500 for access." (false, and a compliance problem)

Regional offer differences — important for targeting

Market	Offer
Most of the world	Fund a partner broker account → full access (money stays theirs)
Malaysia / Indonesia	Same, different partner broker
US / UK	⚠ No partner broker available — a one-time lifetime membership instead, arranged directly

Implication: the standard "free desk, fund your own account" creative **does not apply to US/UK**. Either exclude those markets or run a separate campaign with different messaging. **Confirm with Don before targeting them.**

(Commercial detail — broker names, rebate rates, membership pricing — is internal. Ask Don if a campaign genuinely needs it; it must never appear in public creative.)

The funnel

Meta ad

- Landing page (`marketmakersfx.net/lp/{feature}`)
- Free signup (email + password, or one-tap Google)
- 7-DAY full-access trial – everything unlocked, no card
- Trial ends → /upgrade (automatically routed by region)
- Member funds a broker account
- Admin verifies the deposit → Full access continues

Conversion stages we can measure: signup (trial start) → funded member. See `03-LANDING-PAGES-AND-TRACKING.md` for the exact events.

Why the funnel converts: the member experiences the entire product free for 7 days. The upgrade isn't "buy something" — it's *"keep what you're already using"*, and it costs them nothing in fees.

Who the customer is

Core audience: retail traders trading their own money, focused on gold and forex.

Geography	Heavily Southeast Asia — Singapore, Malaysia, Indonesia. Meaningful tail in Africa (Nigeria, South Africa, Kenya), South Asia, Middle East, and Europe
Age/profile	Predominantly men 25–45, self-taught, trading alongside a job or business
Experience	Mixed — from a few months in to several years. Most have <i>some</i> knowledge and <i>no</i> consistency
Language	English (the app is English-only)

What they're feeling (use this for angles)

- **"I keep giving it back."** Wins a week, loses it the next. Inconsistency is the number-one pain.
- **"I've blown accounts before."** Often more than once. There's shame in this — speak to it carefully and without mockery.
- **"I've bought courses that were rubbish."** High scepticism. Hype triggers their defences; plain speech disarms them.
- **"I don't know what I'm doing wrong."** They can't diagnose themselves — which is precisely what the AI Trading Assistant addresses.
- **"Too much information, no system."** Drowning in YouTube and signal groups.

What they respond to

- Specificity over hype ("19 lessons", "10 indicators", "every session")
- Proof of real work — a daily analysis published day after day
- Being treated as an adult, not a mark
- **Diagnosis** — being shown what's actually wrong with their trading

What repels them

- Lambos, watches, cash, "financial freedom" imagery
 - Guru energy and guaranteed-profit language
 - Anything that smells like the last course that burned them
-

Competitive context

Most competitors are **signal sellers** (pay monthly for calls to copy) or **course sellers** (pay once for videos, then nothing). Both leave the trader alone with their own execution.

MMFX's difference: the complete loop — analysis, tools, education, community — *plus* a feedback mechanism that reads their real trading results back to them.

Positioning line: Most educators sell you information and disappear.
MMFX gives you the method *and* reads your actual results back to you.

Brand voice

- **Direct, plain, unhyped.** Slightly blunt. Honest about difficulty.
- **Never** guru energy, emoji-spam, or wealth-flex imagery
- Talks about **process, discipline and skill** — never riches
- Respects the reader's intelligence; most have already been burned
- Warm and premium visually: deep ink tones, a signal-orange accent, clean type (see [04-CREATIVE-ASSETS.md](#))

Tone test: if it sounds like a trading guru on a rented yacht, it's wrong. If it sounds like a professional who'd tell you a hard truth, it's right.
