

MMFX — Complete Feature Reference for Marketing

What this is. A single, accurate description of every feature inside the Market Makers FX member app, written so a marketing/creative process can understand what it's selling without guessing.

Accurate as of: 14 Aug 2026 · **App:** `app.marketmakersfx.net`

Rules of use: Everything here is true of the shipped product. If a claim isn't in this file, don't make it — ask. Section 12 lists things you must never say, and they are compliance rules, not style preferences.

1. What Market Makers FX is

MMFX trains and equips **gold (XAU/USD) and forex traders**. The member app is the home base: the daily market read, the tools to act on it, the education to get better, and — new — the analytics to see whether any of it is working.

The founder is "Don" in all member-facing material. Never "Gordon".

The business model (important context)

MMFX is an **introducing broker (IB)**. Members don't pay a subscription. Instead they open/fund a trading account with a partnered broker under MMFX's IB, and full access switches on.

The money stays in the member's own account, in their own name. It is not a payment to MMFX. This is a genuinely strong selling point — say it plainly.

Access model

Stage	What they get
Sign up (free)	7-day full-access trial — everything unlocked
Trial ends	<i>Limited</i> — features stay visible but locked, with a clear path to restore
Funded member	Full access, permanent while the account stays active

- One **re-trial** is available if needed.
- Sign-in: **email + password**, with a **6-digit email verification code** at

signup, or **one-tap Google sign-in**.

- Funded members register their **MT4/MT5 account number** once, so access is tied to the account they actually trade.

Who the member is

- Retail gold/forex traders, heavily **Southeast Asia** (Singapore, Malaysia, Indonesia) plus a global tail (Africa, South Asia, Middle East, Europe)
- Mostly self-taught, mixed experience, trading their own capital
- Pain: inconsistency, blown accounts, information overload, no feedback loop

2. The organising idea

Trading profitably isn't one skill — it's a loop:

Analysis → Execution → Trade Management, on a **foundation** of education.

The app is built around that loop, and the dashboard lays it out visually. Every feature sits in the stage where a trader needs it. **This framing is very useful for marketing** — it lets you position any single feature inside a bigger system rather than as a standalone gimmick.

3. 🚩 AI Trading Assistant — the flagship

Members only. Launched 14 Aug 2026. Full detail: [docs/features/AI-TRADING-ASSISTANT.md](#).

Connects to the member's live MT4/MT5 account **read-only** and automatically reads every trade they've made — then tells them where they're losing money and why. No manual logging, ever.

- **Performance:** equity curve, net P&L with period-over-period change, win

rate, profit factor, expectancy, R:R, max drawdown, streaks, hold time, exposure; breakdowns by symbol, session and weekday

- **Leaks to beat:** names the behaviour costing money — revenge trading,

oversized losses, overtrading, worst time slot, sizing up after losses — **in dollars**, linked to the exact trades

- **Discipline score:** the member sets their own rules (max daily loss, max trades/day, max lot size, instruments, sessions); scored as the share of the last 30 trading days with **zero breaches**

- **"Don's read":** an AI coach that reviews their real trades against their own goals and gives concrete fixes (on demand, 5/day)

- **Survival engine:** account health, "N losing trades from your limit", weekly mission, and proactive warnings by banner + email

Trust story (lead with this): read-only investor password — it can never trade or withdraw — and the password is never stored.

Best hook: *"You don't have a strategy problem. You have a 'nobody's keeping score' problem."*

4. Daily Analysis — Don's daily market read

Don's own top-down XAU/USD analysis, published as a regular series (**59 editions published to date**).

Each edition includes:

- A **video walkthrough** of the charts
- A **written report (PDF)** with the levels and reasoning
- The day's **bias** and a **session tag**

Member value: they don't start the day guessing. They see how a professional reads the same chart they're looking at — which is education disguised as a daily habit.

Marketing angle: the consistency is the proof. A daily read, published day after day, is evidence of real expertise in a market full of screenshot traders. Great for "day in the life" and habit-forming content.

5. Signals — the signals desk

The **MMFX Signals Channel** surfaced inside the app.

Member value: trade ideas from the desk, in context.

⚠ **Compliance-sensitive.** Signals must never be framed as guaranteed, "accurate", or an income source. They are trade *ideas* for the member to evaluate — never advice, never a promise. Keep claims about signals conservative and never quote a win rate.

6. Team MM — the private VIP desk

A **members-only Telegram desk**, invitation-controlled.

How it works: the member taps through to a **direct message with the desk**, the desk verifies they're a funded member, then sends a **personal, one-off invite link**. Invites are added by hand — there's no public join link.

Member value: proximity. A small room with the desk and other funded traders, not a 10,000-person free channel.

Marketing angle: exclusivity that's *real* rather than claimed — the manual invite process is itself the proof. Strong retention/aspiration lever.

7. Indicators — 10 proprietary TradingView tools

Invite-only TradingView indicators, **granted automatically** once the member enters their TradingView username:

Indicator	
MM Squeeze Pulse	MM Pivot Trend
MM Wave Pressure	MM MTF Minicharts
MM Structure Map	MM Auto Trendlines
MM Echo Predictor	MM Adaptive MA
MM Trend Rail	MM Reversion Bands

Member value: MMFX's method, encoded on their own charts. They're not copying a screenshot — they see the same signals Don does.

Marketing angle: *proprietary* and *invite-only* are literal here — these scripts cannot be obtained anywhere else. Access appears on their TradingView account automatically, which demos beautifully.

⚠ Indicators are analysis tools. Never claim they predict price or produce profits.

8. Strategies — 2 backtestable systems

Full TradingView **strategy** scripts (not just indicators), so members can backtest on their own charts:

- **MM AMA SuperTrend** — adaptive-MA SuperTrend: trend direction, flip levels,

long/short triggers, backtested on gold

- **MM System 5m Entry** — the 5-minute entry model in code: HTF bias, buy/sell

zones, confirmation

More slots are in build.

Member value: they can test the method against history themselves instead of taking anyone's word for it.

Marketing angle: "don't believe us — backtest it" is a confident, trust-building message. ⚠ Never publish or imply specific backtest returns.

9. Course — the MM Mentorship

The structured MM System curriculum: **video modules** plus the **slide deck** for each module. Video is DRM-protected and watermarked.

Member value: the complete method, in order, rather than scattered tips.

Marketing angle: this is the "foundation" layer — the answer to *"where do I even start?"* Pairs naturally with the beginner/overwhelmed avatar.

| 10. Know Your Style — trader archetype profiler

An interactive profiler: the member answers **14 questions** and gets their **trader archetype** and a personalised profile, with the result emailed to them.

Member value: self-awareness — which style actually fits their temperament, time and risk appetite, instead of forcing themselves into someone else's.

Marketing angle: ★ **the strongest top-of-funnel asset in the app.** Quizzes convert: they're interactive, self-revealing, and instantly shareable ("I'm a ___ trader"). Ideal for lead-gen and social. It's also the first thing we point new members at, so it doubles as onboarding.

| 11. Everything else

Fundamental Desk

A live macro read on gold — the current fundamental picture driving XAU/USD. **Value:** the *why* behind the move, without reading ten news sites.

Live Classes

Scheduled live teaching sessions inside the app. ⚠️ **Check the current schedule before promoting** — don't advertise a class that isn't booked.

Library

Downloadable member resources, including:

- **The MM System (eBook)** — the flagship
- **The Five-Stage Workflow**
- **Decision Trees & Invalidation**
- **Cheat Sheets & Quick Reference**

Value: reference material to keep beside the screen while trading.

News & Articles

Curated forex/macro headlines **with sentiment**, filtered to what matters for gold and FX. **Value:** market awareness without doomscrolling.

Economic Calendar

Upcoming high-impact economic events. **Value:** they know what's coming before it moves the market.

Dashboard

The member's desk at a glance: live prices, their status, today's brief (gold bias, next class, latest analysis), the workflow pipeline, and the news feed.

Start here (roadmap)

A guided first-run path so new members know what to do first instead of bouncing off a wall of features.

| 12. ⚠️ Compliance — non-negotiable

MMFX operates as an introducing broker in a regulated space, with a Singapore-centred audience. **These rules override any creative idea.**

Never say or imply

- ❌ Guaranteed, typical, expected or implied **profits, income or returns**
- ❌ "Risk-free", "can't lose", "sure thing", "passive income"
- ❌ That any tool **predicts** the market
- ❌ That signals/indicators are "accurate", or any win-rate claim
- ❌ Specific member results without **written consent**
- ❌ Screenshots of profits presented as typical
- ❌ **Financial advice** or personalised investment recommendations
- ❌ Pressure/urgency framing that pushes someone to deposit money
- ❌ That the broker deposit is a payment to MMFX (it isn't — it's their money,

in their own account)

Always true / safe

- ✅ Tools are for **analysis and education**
- ✅ The AI Trading Assistant is **read-only** — it cannot trade or withdraw
- ✅ Outcomes depend on the member's own decisions
- ✅ **Trading carries risk of loss** — include risk disclosure where required
- ✅ Past performance never indicates future results
- ✅ Disclose the IB relationship where required

Safe vs unsafe phrasing

✗ Unsafe	✓ Safe
"Stop losing money"	"See where your money is leaking"
"Our signals are 80% accurate"	"Trade ideas from the desk, with the reasoning"
"Make consistent profits"	"Build a consistent process"
"This indicator predicts reversals"	"This indicator highlights potential reversal zones"
"Turn your account around"	"See what your account is actually doing"

13. Voice

- **Don**, never Gordon, in member-facing material
- Direct, plain, unhyped. Slightly blunt. No emoji-spam, no guru energy
- Talk about **process and discipline**, not riches
- Respect the reader's intelligence — most have been burned by hype already
- Plain English over jargon in broad-audience material; technical depth is fine

for the daily analysis audience

14. Positioning summary

What MMFX actually sells: not signals, not indicators — **a complete trading system with the feedback loop attached.** Analysis to read the market, tools to act, education to improve, and now an assistant that shows whether it's working.

The differentiator: most educators sell you information and disappear. MMFX gives you the method *and* reads your actual results back to you.

The access story: no subscription. Fund your own broker account — your money, your name — and it all switches on.

15. Verify before publishing

Always confirm current facts before a campaign:

- Live class schedule
- Member counts or any aggregate results
- Broker terms, deposit amounts, regional offers
- Anything described as "new" or "coming soon"
- Any individual member's results (needs written consent)
