

Market Makers FX — Master IB Proposal

Prepared for: Dupoin Markets · From: Don, Market Makers FX Date: 28 August 2026

What this is

Dupoin has proposed a Master IB arrangement: the broker sources IBs, they sit under the MMFX MIB, MMFX supplies them with the platform, products and marketing to actually produce, and MMFX earns a per-lot override on the volume they generate.

This pack sets out exactly what MMFX would provide, what it needs from Dupoin, what exists today versus what would be built, and what the first ninety days look like.

Read in this order

#	Document	What's in it
01	01-THE-OFFER	The positioning, how value is actually created, the three tiers
02	02-PRODUCT-BOUNDARY	The most important document. What MMFX provides, what the IB provides, and what does not white-label
03	03-SERVICE-CATALOG	The full service list across lead generation, capture, product and enablement
04	04-CAPABILITY-REGISTER	Live today / build required / not built. Nothing overstated
05	05-COMMERCIAL	The commercial ask and the three conditions this depends on
06	06-PHASING	Build, pilot, scale — with the metrics the pilot is judged on
07	07-COMPLIANCE	The rules every desk operates under, and where liability sits

Separate: **IB-ONE-PAGER** — the sub-IB-facing summary, for the IBs themselves.

The 60-second version

The problem with most IB programmes. A broker signs IBs, hands them a referral link and a folder of banners, and the majority produce nothing. They have an audience but no product, so their traders open an account, trade for a few weeks, lose interest or lose the account, and stop. Volume dies because accounts die.

What MMFX proposes. Give every IB under the MIB a complete, white-labelled trading desk under their own brand: a suite of TradingView indicators granted automatically, an AI trading assistant that connects read-only to the trader's live account and shows them where they are leaking money, a macro research bot, a trader-profiling quiz, an economic calendar, filtered market news, a short foundation course, and a full sign-up-to-funded funnel with lifecycle email and analytics behind it. If the IB has their own content, they upload it and it appears on their desk. If they don't, the tools stand on their own.

Why this produces volume. Because it addresses the term of the equation that nobody else addresses:

$$\text{Volume} = \text{funded accounts} \times \text{lots per account per month} \times \text{months the account stays alive}$$

Banners buy the first term. MMFX's platform buys the third. A trader who is being coached, who can see their own behaviour in dollars, and who has a reason to log in every day stays funded and keeps trading. Dead accounts generate nothing.

What MMFX asks for. A per-lot override on downline volume, and three specific things from Dupoin without which the model does not function. They are in **05-COMMERCIAL** and they are not negotiable in principle, only in detail.

Five things worth knowing before you read further

1. **This is not vapourware.** The desk described here is live in production today at **app.marketmakersfx.net**, serving MMFX's own members. The white-label work is making an existing, working product multi-tenant — not building it from scratch. **04** separates the two honestly.
1. **MMFX needs sub-IB-level volume data from Dupoin.** Which trader belongs to which IB, and how many lots they trade. Without it, MMFX cannot attribute, cannot optimise and cannot prove any of this worked. This is the single hard dependency.
1. **The pilot builds the real product, not a demonstration.** Three IBs, three genuinely branded desks, sixty to ninety days, measured against Dupoin's own baseline numbers.
1. **MMFX does not fund ad spend.** The override is paid after volume; advertising is paid before it. Where MMFX runs paid media for an IB, that spend comes from the IB or is co-funded by the broker.
1. **A desk that produces nothing still costs money to run.** Every tenant carries a monthly infrastructure cost from day one. Every IB agreement needs a minimum-volume threshold and a dormancy clause.
