The ask

Item	MMFX's position
Override	A per-lot override on all volume generated by IBs under the MMFX MIB, rate to be set by Dupoin. Tiered by service level if Dupoin prefers
Data access	Sub-IB-level volume reporting on a defined refresh cadence — see condition 1
Term	A term long enough to justify the platform investment. MMFX builds before it earns
Exclusivity	Open to discussion in both directions — see open questions
Trader portability	To be settled in writing at the outset — see below
Ad spend	Funded by the IB or co-funded by Dupoin, never by MMFX — see condition 2

Trader portability

If the arrangement ends, what happens to the traders MMFX acquired, onboarded and retained?

MMFX will have built the desk, run the acquisition, carried the support and kept the accounts alive. Those traders will sit in Dupoin accounts under IBs Dupoin introduced. Without an agreed position, this becomes a dispute at exactly the moment when goodwill is lowest.

MMFX is not asking for a particular outcome here. It is asking that the outcome be written down before either party has an incentive to argue about it.

The three conditions

These are not preferences. Each one, if unmet, breaks the model in a specific and predictable way.

Condition 1 — Sub-IB-level volume reporting

What is needed. A regular data feed identifying, for every trading account under the MMFX MIB:

Field	Why
Sub-IB identifier	Attribute every trader to the IB who introduced them
Trading account number	Match to the platform member — the mechanism for this is already live
Account open date	Measure time-to-fund and cohort behaviour
Deposits and current balance	Verify funding and detect at-risk accounts
Lots traded, per period	The single most important field. It is what MMFX is paid on and what every optimisation decision depends on
Last trade date / account status	Measure survival, which is the core claim in 01

Weekly is workable. Daily is better. File export is acceptable; an API is preferable.

Why it is non-negotiable. Without it MMFX cannot attribute a funded account to an IB, cannot tell a productive IB from an unproductive one, cannot optimise advertising toward accounts that actually trade, cannot invoice against a verifiable number, and cannot prove that any of this worked. Every commercial claim in this pack becomes unfalsifiable.

How close this already is. MMFX already ingests Dupoin's referred-account export, parses it against a configurable column mapping, and matches trading account numbers to platform members. That pipeline is live. The gap is two fields in the data — sub-IB and lots — not a system that needs building.

Also requested: Dupoin's baseline figures. Average account survival, attrition and lots per account per month across the existing IB book. Without a baseline, the retention argument in 01 can be asserted but never demonstrated. With it, the pilot produces a measured comparison — which is as useful to Dupoin as it is to MMFX.

Condition 2 — Ad spend is not funded by MMFX

The override is paid after volume is generated. Advertising is paid weeks before it. Any arrangement where MMFX funds media against a future override transfers the entire working capital risk to MMFX for revenue it does not control.

Where MMFX runs paid media for an IB under Tier 3, that spend comes from the IB or is co-funded by Dupoin. MMFX supplies the strategy, the creative, the build and the management.

Condition 3 — A minimum-volume threshold and a dormancy clause

Every live desk carries a monthly infrastructure cost from the day it launches: live account connections billed per account, market data, email, hosting, database. An IB who signs up, takes a branded desk and produces nothing is a permanent cost centre.

Every IB agreement therefore needs a minimum-volume threshold and a clear dormancy position — a desk that produces nothing for a defined period is archived and can be reactivated when the IB is ready.

This protects Dupoin as much as MMFX. A network of dormant branded desks is a liability for both parties.

| Open questions for Dupoin

1. **Exclusivity.** Does Dupoin expect exclusivity from MMFX, and on what terms?
2. **Contracting.** Who is the counterparty on the IB agreement — MMFX contracting the IB directly, or Dupoin contracting the IB with MMFX as service provider? This determines where the content policy and compliance obligations in 07 are enforced.
3. **Market exclusivity between IBs.** Where two IBs under the MIB target the same market and language, is any territory or channel separation offered? Worth settling before it becomes a complaint.
4. **Override structure.** Flat per lot, or tiered by service level and volume?
